Quick Reference

Resource	URL
Document Authoring (base site)	https://da.live/#/savitaagre/edsmsm
Preview	https://main--edsmsm--savitaagre.aem.page
Live	https://main--edsmsm--savitaagre.aem.live
Block Library (if configured)	https://da.live/#/savitaagre/edsmsm/.da/library
Bulk Operations	https://da.live/apps/bulk
Org configuration (MSM tab)	https://da.live/config#/savitaagre/
MSM app	https://da.live/app/adobe-rnd/aem-apps/tools/apps/msm/msm

Sites in the savitaagre organization

The site list and content sources below come from the Config Service (`admin.hlx.page/config/savitaagre/sites.json`). The organization has three sites, so it is a multi-site setup.

Site	Role	Content source (Document Authoring)	Code repository
edsmsm	MSM base (this project)	content.da.live/savitaagre/edsmsm	github.com/savitaagre/edsmsm
ema	MSM satellite	content.da.live/savitaagre/ema	github.com/savitaagre/ema
savisite	MSM satellite	content.da.live/savitaagre/savisite	github.com/savitaagre/savisite

Site	Preview	Live
edsmsm	https://main--edsmsm--savitaagre.aem.page	https://main--edsmsm--savitaagre.aem.live
ema	https://main--ema--savitaagre.aem.page	https://main--ema--savitaagre.aem.live
savisite	https://main--savisite--savitaagre.aem.page	https://main--savisite--savitaagre.aem.live

The authoring workspace for each site is `https://da.live/#/savitaagre/<site>` (for example https://da.live/#/savitaagre/ema).

> Important: `ema` and `savisite` are registered as satellites of `edsmsm`, but they **do not inherit content from edsmsm yet**. See the "Multi-Site Manager" chapter.

Getting Started

Access requirements

- ☐ A Document Authoring (da.live) account with access to the `savitaagre` organization (ask your administrator).
- ☐ Preview and publish permissions for `edsmsm` (and for `ema` / `savisite` if you author satellites).
- ☐ Sign in to da.live before previewing or publishing. Preview, publish and the MSM actions run under your signed-in identity. Requests without a signed-in author are rejected.

Your first page

1. Open https://da.live/#/savitaagre/edsmsm.
2. Go to the folder the page belongs in (for example `/us/en/magazine`).
3. Create a new document and give it a lower-case, hyphenated name (the name becomes the URL).
4. Write the content. Insert blocks as tables (from the Library sidebar if available, or as a table whose first row holds the block name).
5. Add a **Metadata** table at the bottom of the document (Title, Description, Image).
6. Select **Preview**, check the page on `aem.page`, then select **Publish**.

Content Organization

Site structure in Document Authoring

Path	What it is	Status on edsmsm today
`/us/en`	WKND home page, a same-design replica of https://wknd.site/us/en.html	Previewed and published
`/nav`	Header content (account, language list, logo, nav links, search)	Previewed and published
`/footer`	Footer content (logo, nav, Follow Us, legal text)	Previewed and published
`/drafts/wknd-shell`	Test page that only checks the header and footer	Preview only (not published)
`/us/en/adventures/*`	16 adventure detail pages	In DA, **not previewed or published yet**
`/us/en/magazine/*`	5 magazine articles	In DA, **not previewed or published yet**

The 16 adventures are: bali-surf-camp, beervana-portland, climbing-new-zealand, colorado-rock-climbing, cycling-southern-utah, cycling-tuscany, downhill-skiing-wyoming, gastronomic-marais-tour, napa-wine-tasting, riverside-camping-australia, ski-touring-mont-blanc, surf-camp-costa-rica, tahoe-skiing, west-coast-cycling, whistler-mountain-biking, yosemite-backpacking.

The 5 magazine articles are: arctic-surfing, guide-la-skateparks, san-diego-surf, ski-touring, western-australia.

What this means for authors:

- Links on the home page and in the header/footer that point to adventure and magazine pages return "404 Not Found" on preview and live until those pages are previewed and published. Preview and publish them (Bulk Operations is the fastest way) to make the links work.
- The listing pages linked from the navigation (`/us/en/adventures`, `/us/en/magazine`, `/us/en/faqs`, `/us/en/about-us`) have not been created on this site yet. They are needed to make the main navigation work.
- Use `/drafts/` for test pages. Do not publish drafts.

Languages

The site has one language tree: **US English (`/us/en`)**. The header region switcher lists 7 countries and 11 locales (en-US, es-US, en-CA, fr-CA, de-CH, fr-CH, it-CH, de-DE, fr-FR, es-ES, it-IT). Only en-US exists; the other locale links point to paths that have not been migrated and will return 404 (see "Open Owner Decisions").

Block Library

The **Block Library** is the sidebar in Document Authoring where you browse and insert blocks. If it has been set up for this project, open it from the Library icon in the editor, or go to https://da.live/#/savitaagre/edsmsm/.da/library. If the Library does not show these blocks, insert them as a table whose first (header) row contains the block name, for example `Hero Carousel`. Use the authored home page `/us/en` as a working example to copy from.

Authoring Rules That Apply Everywhere

These rules come from the project code and apply on every page.

Rule	What to do	What happens
Sections	Separate sections with a horizontal rule (`---`)	Each section becomes its own page band
Section titles	Write an H1 or H2 as normal text (outside a block)	A short yellow underline is added automatically. An H3 (such as "Where do you want to go?") gets no underline
CTA buttons	Put **one link alone in its own paragraph**	It becomes the yellow WKND button automatically. No bold or italic is needed
Button accessible name	Set the link **title** to a different text, for example title "read our articles" on the link "All Articles"	The title becomes the button's `aria-label` (screen-reader name). If the title equals the link text, nothing changes
Separator line	Create an **empty section** that contains only a Section Metadata table with `style` = `separator`	A thin grey line with 64px of space above and below
Never author an `<hr>` as a visual line	An authored horizontal rule is always the **section delimiter**	Use the separator section above instead
Image titles	Fill in the image title in DA if you want a tooltip	The `title` attribute is kept on the published image
Image alt text	Always add alt text	Used by screen readers and search engines
Missing or extra cells	Keep the cell order shown in this guide	Most blocks tolerate a missing cell, but some (Accordion, Quote, Columns, Widget) fail if left empty

Home Page (`/us/en`)

The home page is built, in order, from these sections:

1. **Hero Carousel**: three slides (WKND Adventures, San Diego Surf Spots, Downhill Skiing Wyoming).
2. **Featured Teaser**: "Featured Article / Camping in Western Australia".
3. **Recent Articles**: H2 title, an **Image List** with 4 articles, then an "All Articles" CTA paragraph (link title "read our articles").
4. Separator section (`style: separator`).
5. **Next Adventures**: H2 title and a **Hero Teaser** ("Climbing New Zealand").
6. **Where do you want to go?**: H3 title, an **Image List** with 4 adventures, then an "All Trips" CTA (link title "explore our adventures").
7. Separator section (`style: separator`).
8. Metadata: Title "WKND Adventures and Travel", Description, Image (share image), Template `landing`.

Hero Carousel

Full-width slider at the top of the page. One row per slide, two cells per row.

Hero Carousel	
image	**H1** WKND Adventures / description paragraph / link "View Trips"
image	**H2** San Diego Surf Spots / description / link "Full Article"
image	**H2** Downhill Skiing Wyoming / description / link "View Trip"

- Use **H1 on slide 1 only** (it is the page's single H1). Use H2 on all other slides.
- Each text cell holds: heading, one description paragraph, one CTA link.
- Previous/next arrows and dots appear when there are two or more slides. There is **no autoplay**.
- The first slide's image loads first, so make it the most important image.

Featured Teaser

Image beside a grey text panel. One row with two cells.

Featured Teaser	
image	Pretitle paragraph ("Featured Article") / **H2** title / description / CTA link ("Full Article")

- The text before the heading is the pretitle and the text after it is the description. A paragraph containing only a link becomes the CTA.

Image List

A row of cards (four across on desktop). It is used twice on the home page. One row per card.

Image List	
image	Title as a link (paragraph containing only the link) / description paragraph

- The image is linked to the title's URL automatically.

- The title link is **not** turned into a button here.
- Long descriptions are shortened to one line with "…" on the card. The full text is still in the page.
- The content is not filled in automatically. Each card is authored by hand.

Hero Teaser

Full-bleed image with a white card overlapping it. One row with two cells.

Hero Teaser	
image	**H2** title / description / CTA link ("See Trip")

- The card overlaps the image on wide screens (1165px and wider). On smaller screens it stacks under the image.

Header and Footer

The header and footer are documents in DA: `/nav` and `/footer`. Edit them, then **Preview and Publish** them. Changes appear on every page. A page can point to a different header or footer with the `nav` or `footer` metadata fields.

`/nav` (header): five sections in this exact order

Section	Content
1. Account	"Welcome" paragraph (hidden), link "Sign In" (`#sign-in`), link "Sign Out" (`#sign-out`, hidden)
2. Language list	Toggle link "en-US" (`#langNavToggle`), then a bulleted list: one item per country (for example "United States") with a nested list of locale links (`/us/en` = en-US). The link title is the language name. Flags are added automatically
3. Logo	Linked logo image (`/us/en`)
4. Nav links	Nested list: "Home" (`/us/en`) with sub-items Magazine, Adventures, FAQs, About Us
5. Search	Link "Search" (`/us/en/ai-powered-search`), shown as a search icon

The header changes style after you scroll. On screens 1024px wide or less, the navigation becomes a slide-in menu.

`/footer`: sections in this order

Section	Content
1. Logo	Linked light logo image
2. Nav	Same nested list as the header ("Home" is hidden, its sub-items are shown)
3. Follow Us	H4 "Follow Us", then a list of 3 social links: Facebook, Twitter, Instagram. The link title is the accessible name. The icon is chosen from the link
4. Legal text	Copyright line and the WKND disclaimer paragraphs

Do not add more than seven sections to the footer; extra sections are dropped.

Available Blocks

All blocks in the project, including those used by the adventure and magazine pages that are not yet published.

Block	Purpose	Content model (rows and cells)	Notes
Hero Carousel	Home hero slider	One row per slide: image / heading, text, CTA	H1 on slide 1 only. No autoplay
Featured Teaser	Image plus grey text panel	One row: image / pretitle, H2, text, CTA	Home “Featured Article”
Image List	Four-across cards	One row per card: image / title link, description	Static. Used twice on home
Hero Teaser	Full-bleed image with overlapping card	One row: image / H2, text, CTA	Home “Next Adventures”
Hero	Banner with text card	**Two rows**: row 1 image, row 2 heading, text, CTA	Adventures listing. Do not put image and text side by side in one row
Carousel	Adventure photo gallery	One row per slide: image / optional text	Arrows and dots with 2 or more slides. No autoplay
Tabs	Tabbed panels (adventure Overview, Itinerary, What to Bring)	One row per tab: label / content	Keep tab labels unique
Adventure Meta	Adventure fact list	One row per fact: label / value (Activity, Trip Length, Difficulty, Price)	
Breadcrumbs	Trail at the top of detail pages	One row per crumb: link; last row = current page (plain text)	Links are never buttons
Adventures Filter	All adventures with category tabs	Leave empty	Built from the site index. Uses `category` metadata
Adventure Cards	Adventure card rail	Optional cell: number of cards (default 4) or `all`	Built from the site index
Magazine Cards	Magazine card rail	Optional cell: number, `all`, and/or `recent` (e.g. `4 recent`)	Built from the site index
Columns Featured	Featured article promo (columns style)	One row: text / image	Used on landing pages
Columns	Generic multi-column layout	One row, one cell per column	Stacks on mobile
Cards	Generic card grid	One row per card: image / H3 link, text	Variant: `Cards (minimal-dark-withimg)`
Contributors	Team / people grid	One row per person: avatar / name / role / social links	Social icon chosen from link text (facebook, twitter, instagram, …)
Members Only	Locked “Members Only” teaser cards	One row per card: image / title / tagline / label	Always shows “Read More” (not clickable)
Writer Details	Article author byline	One cell per row: avatar, name, occupation lines	Magazine articles

Block	Purpose	Content model (rows and cells)	Notes
Social Links	Article share links	One link per row; link text picks the icon	On articles it moves into the sidebar
Quote	Pull quote	Row 1 quote, row 2 optional attribution (italic = citation)	Do not leave empty
Accordion	FAQ questions	One row per item: question / answer	Both cells required. Use with `style: faq`
FAQ Sidebar	"Need more help?" box	One cell: heading and paragraphs	Same section as the Accordion
Category Filter	Static filter bar plus cards	Row 1 labels, then image / content rows	Not used today; filtering has no effect in DA
Fragment	Reuse content from another document	One cell: path starting with `/`	Any link to `/fragments/...` is inserted automatically
Widget	Embed a coded widget	Link to `/widgets/...`	No widgets exist in the project yet
Header / Footer	Site chrome	Authored in `/nav` and `/footer`	Do not insert manually

Magazine article pages (`/us/en/magazine/*`) get a two-column layout and a "related articles" sidebar automatically, based on their location. Authors do not need to add anything for this.

Index-driven blocks

Adventure Cards, Magazine Cards, Adventures Filter and the magazine sidebar read the site index (`/query-index.json`). The index only lists **published** adventure and magazine pages that have a share image. Today the index returns 404 because none of those pages are published, so these blocks show no cards until the pages are published. If the index still returns 404 after publishing, ask your administrator to check the index configuration in the Config Service.

Page Templates

The project has no separate template folder. Page types are defined by which blocks they use:

Page type	Example	Blocks used	Metadata
Home / landing	`/us/en`	Hero Carousel, Featured Teaser, Image List, Hero Teaser	Template `landing`
Adventure detail	`/us/en/adventures/tahoe-skiing`	Breadcrumbs, Carousel, Tabs, Adventure Meta	Title, Description, Image, `category` recommended
Adventures listing	`/us/en/adventures`	Hero, Adventures Filter	Title, Description
Content landing	`/us/en/magazine`, `/us/en/about-us`	Columns Featured, Magazine Cards (`all`), Contributors, Members Only	Title, Description
Magazine article	`/us/en/magazine/arctic-surfing`	Breadcrumbs, Writer Details, Social Links, Quote	Title, Description, Image
FAQ	`/us/en/faqs`	Accordion, FAQ Sidebar (section `style: faq`)	Title, Description

`Template: landing` adds a class to the page. It has **no visible effect** today, but keep it on the home page.

Sections and Section Metadata

Create sections with a horizontal rule (`---`). To style a section, add a **Section Metadata** table at the end of that section:

Section Metadata	
style	separator

Several styles can be combined, separated by commas.

Style	Effect
`separator`	Use in an otherwise empty section: draws a thin grey divider line with space above and below
`light` / `highlight`	Light background band with 40px vertical padding
`light-grey`	Vertical spacing for the featured-article band (used with Columns Featured)
`faq`	Two-column FAQ layout on desktop: Accordion on the left, FAQ Sidebar on the right

Page Metadata

Add a **Metadata** table at the bottom of each page.

Property	Required	Purpose	Example
Title	Yes	Browser title and search result title	WKND Adventures and Travel
Description	Yes	Search and social description	WKND is a collective of outdoors ...
Image	Recommended	Social share image. **Required** for adventures and articles to appear in card rails	URL or inserted image
Template	No	Adds a page class (`landing` on the home page)	landing
Category	Adventures	Comma-separated categories for the Adventures Filter (Climbing, Cycling, Skiing, Surfing, Travel)	Skiing
nav	No	Use a different header document	/nav
footer	No	Use a different footer document	/footer

New adventures without a `category` only appear under the "All" filter tab.

Configuration Sheets

None of the standard configuration sheets are published on edsmsm today (all return 404). Create them in DA when needed, then preview and publish them.

Sheet	Location in DA	Purpose	When to update
Placeholders	`/placeholders`	Reusable text strings	Not used by the current code. Create only if a developer adds placeholder support
Redirects	`/redirects` (columns: Source, Destination)	Forward old URLs to new URLs	After moving, renaming or deleting a page
Bulk Metadata	`/metadata` (column URL with patterns such as `/us/en/adventures/**`, plus property columns)	Apply metadata to many pages at once	For example to set `Category` or a default `Image` per folder

Publishing Workflow

Environment	Domain	Purpose
Preview	`main--edsmsm--savitaagre.aem.page`	Check changes before going live
Live	`main--edsmsm--savitaagre.aem.live`	Production site

Workflow: Edit in DA, then Preview, check the result, then Publish. The page is live right away.

- Header and footer changes need `/nav` or `/footer` to be **published**, not just the page.
- Images are published with the page that uses them.
- **Bulk:** https://da.live/apps/bulk. Paste a list of URLs (for example the 16 adventures and 5 articles) and run Preview, then Publish.
- Code changes are shipped separately by developers. Content publishing does not need a developer.

Multi-Site Manager

Multi-Site Manager (MSM) lets several sites share content from one **base** site. A **satellite** site inherits every page it does not have its own copy of. If a page exists on the satellite, it is **detached** and the local copy is used. Reference: https://www.aem.live/docs/ew/administering/multi-site-manager

How it is configured for savitaagre

Setting	Value
Org config `msm` tab (https://da.live/config#/savitaagre/)	Base `edsmsm`, satellites `ema` and `savisite`
Prepare menu plugin "Multi-site Manager"	Enabled in the `prepare` tab of edsmsm, ema and savisite
MSM app	Enabled in the `apps` tab of edsmsm, ema and savisite

Current limitation: satellites do not inherit yet

For inheritance to work, a satellite's content source must be the MSM content provider: `https://da-msm.adobeaem.workers.dev/savitaagre/<site>/`. Today `ema` and `savisite` still use their own content source (`content.da.live/savitaagre/<site>`), so **they do not inherit from edsmsm**. Each satellite only shows pages authored directly in that satellite.

The switch was tried once. A preview request through the MSM provider sent without a signed-in author returned **401 (not authorized)**, so the change was reverted. Before switching again, the team must know:

- Switching the content source **resets the satellite's delivered content**. Every satellite page (inherited or local) must then be **re-previewed and re-published by a signed-in author from da.live**, for example with the MSM app or Bulk Operations.
- Each satellite also uses its **own code repository** (savitaagre/ema, savitaagre/savisite). Inherited pages are displayed with that satellite's blocks and styles. The WKND blocks must exist in those repositories for inherited pages to look the same as on edsmsm.
- The administrator makes the switch in the Config Service. Authors cannot do it.

Author workflow (once inheritance is enabled)

Open a page in da.live, select **Prepare**, then **Multi-site Manager**. The panel adapts to the site you are in.

Base view (editing in edsmsm). Satellites are grouped into *Linked* (inherit the page) and *Detached* (have their own copy).

Action	Applies to	What it does
Preview	Linked satellites	Pushes the base page to the satellite's preview
Publish	Linked satellites	Pushes the base page to the satellite's live site
Detach	Linked satellites	Copies the base page to the satellite as an independent local copy
Sync (Merge)	Detached satellites	Merges base changes into the local copy, keeping local edits where possible
Sync (Replace)	Detached satellites	Replaces the local copy with the base page. **Local edits are lost**
Reconnect	Detached satellites	Deletes the local copy so the satellite inherits from the base again

Satellite view (editing in ema or savisite).

Action	What it does
Get from base	Pulls the base page into this site as a detached local copy you can edit
Sync (Merge or Replace)	Updates your detached copy from the base
Reconnect	Deletes your local copy and resumes inheritance from the base

MSM app (many pages at once). Open the MSM app, enter `savitaagre` (and optionally a site), select **Load**, select pages or folders, then choose Preview, Publish, Detach, Merge, Replace or Reconnect. Set the sync mode and which satellites to include, then follow each operation's status. It runs up to five requests at a time and names the target sites before it starts.

Good practice

- Always review a satellite page after **Merge**. Pages whose structure differs a lot from the base can merge unexpectedly.
- Prefer **Detach** only for pages that really need local changes. Every detached page has to be kept in sync by hand.
- Create and delete satellite pages through MSM. Pages created or deleted outside MSM confuse the Linked/Detached status.
- If Preview or Publish fails after Reconnect, preview or publish the page manually from the base site.

Common Tasks

Task	Steps
Create a page	Open the folder in DA, then New, then Document. Add content and a Metadata table, then Preview and Publish
Edit a page	Open it in DA, make changes, then Preview and Publish
Add a home-page slide	Add a row to Hero Carousel: image / H2, text, CTA link. Preview and check the arrows and dots
Add a CTA button	Put a single link alone in its own paragraph. Optionally set a link title for the accessible name
Add a divider	Add an empty section with Section Metadata `style` = `separator`
Publish the adventures and articles	Bulk Operations: paste the 21 URLs, Preview, check, Publish
Delete a page	Add a redirect first, then delete the document, then publish `/redirects`
Update navigation	Edit `/nav`, keep the 5 sections in order, Preview, Publish
Update the footer	Edit `/footer`, Preview, Publish

Images and Media

Method	How
Drag and drop	Drag images into the DA editor; they are stored with the site's media
Copy and paste	Paste images directly into a table cell

Use descriptive file names, always add alt text, and add an image title if you want a tooltip. Images are optimized and resized automatically for each screen size.

Open Owner Decisions

These items need a decision from the site owner. Until then they behave as described.

Topic	Current behavior	Decision needed
Sign In	The “Sign In” link in the header looks like the original but has **no back-end**. Nothing happens when it is clicked	Connect a login service or remove the control
Analytics	**No analytics or tag-manager tags** are shipped. Visits are not tracked	Choose which tags (if any) to run on the new site
Region switcher	Locale links (es-US, en-CA, fr-CA, de-CH and others) point to **paths that have not been migrated** and return 404	Migrate the other locale trees or remove them from `/nav`

Troubleshooting

Issue	Solution
Page not updated after publish	Wait 1 to 2 minutes, then hard refresh (Cmd+Shift+R or Ctrl+Shift+R)
Home-page links lead to 404	The adventure and magazine pages are not published yet. Preview and publish them
Card rails or the adventures filter are empty	The pages are not published, or have no Image metadata. Publish them and check the index
A CTA is not a button	The link must be the only content in its paragraph (no extra text)
A visible line is missing or a section breaks oddly	Do not use a horizontal rule as a line. Use a `style: separator` section
Block looks broken	Check the row and cell order against this guide and the spelling of the block name
Header or footer change not visible	Publish `/nav` or `/footer`
Satellite page does not show base content	Expected today; satellites do not inherit yet (see Multi-Site Manager)
“No satellite sites configured” in MSM	Check the `msm` tab at https://da.live/config#/savitaagre/
MSM missing from the Prepare menu	Check that the site’s `prepare` tab contains the Multi-site Manager entry
Preview or publish rejected (401)	Sign in to da.live again and retry from the editor
